ACADEMIC COSTUME

The pageantry and color at commencement exercises reveal a record of academic achievement of the various individuals taking part in the exercises. The following brief description is given so that the audience may more readily interpret such achievement.

In 1895, the Intercollegiate Commission, a group of leading American educators, met at Columbia University to draft a code which would serve to regulate the design of gowns and hoods indicating the various degrees as well as the colors to indicate the various faculties. This code has been adopted by most of the colleges and universities in America and its use has made identification of scholastic honors an immediate activity.

Three types of gowns are indicated by the code. Those worn by the bachelors have long, pointed sleeves. Those worn by masters have long, closed sleeves with the arc of a circle near the bottom. The arm goes through a slit, giving the appearance of short sleeves for the master's gown. Doctor's gowns are faced with velvet. The sleeves are full, round and open with three bars of velvet on each sleeve. The velvet facing of bars on the sleeves may be black or the same color as the binding of the hood.

Hoods are made of material identical with the gown and are lined in the official academic color of the institution conferring the degree. If the institution has more than one color, the chevron is used to introduce the second color. Colored velvet or velveteen binds the hoods and indicates the department or faculty to which the degree pertains.

Historical associations of color have been continued to signify the various faculties. Arts and letters can be recognized by the white, taken from the traditional white fur trimming of the Oxford and Cambridge Bachelor of Arts hoods. Red, long traditional of the church, indicates theology. The royal purple of the King's court signifies law. The green of medicinal herbs immediately identifies a medical degree. Philosophy is signified by the color of wisdom and truth, blue. Because through research untold wealth has been released to the world, science is identified by golden yellow. Oxford pink indicates music, and russet brown, the color of dress worn by ancient English foresters, indicates forestry.

The color of the velvet of the hood is distinctive of the subject to which the degree pertains. For example, the trimming for the degree of Master of Science in Agriculture should be maize, representing agriculture, rather than golden yellow, representing science.

At Michigan State University, it is customary to identify the bachelors graduating from the different departments of study by tassels of the official department color as established by the Intercollegiate Code.

MICHIGAN STATE UNIVERSITY

Michigan State University, one of the leading land-grant universities and the first agricultural college in America, strives for excellence in affording liberal and practical education for its students in a broad range of human endeavor.

MSU also serves people of the state, nation and world through its numerous research, extension and international programs.

Now in its 120th year, Michigan State University has grown from three buildings and six faculty members to one of the largest universities in the nation. It has more than 3,000 faculty engaged in teaching, research and public service, 409 campus buildings, and more than 5,100 acres of land of which 2,010 acres are in existing or planned campus development.

Founded in 1855 to educate youth for the major occupation of that day — farming — MSU has broadened its offerings to meet the educational needs of today. The University now has the School for Advanced Graduate Studies and 17 colleges — Agriculture and Natural Resources, Arts and Letters, Business, Communication Arts, Education, Engineering, Human Ecology, Human Medicine, James Madison, Justin S. Morrill, Lyman J. Briggs, Natural Science, Osteopathic Medicine, Social Science, University College, Urban Development, and Veterinary Medicine. Some 165 programs of instruction are available to undergraduates; 76 departments offer graduate studies.

MSU is the only university in the United States to have the Colleges of Human Medicine, Osteopathic Medicine, and Veterinary Medicine on the same campus.

The Honors College, which enables superior students to waive normal graduation requirements and undertake individual programs, attracts many of the nation's finest young scholars. Michigan State University also is a prominent sponsor of the National Merit Scholarship Program, comprised of an unusually select group of scholars.

One of the many innovations in higher education made by Michigan State University is its system of academic-residence halls. Incorporation of classrooms and faculty offices with living, dining and recreational facilities has given these giant dormitories a stimulating academic environment. Each of these nine halls is the center of curricular and noncurricular activities, creating a "college within a college" atmosphere.

The "small college within the larger university" concept was introduced at MSU by the establishment of the Justin S. Morrill College, which offers a limited enrollment liberal education program with an international emphasis. The concept was expanded by the establishment and opening of the James Madison College and the Lyman J. Briggs College. James Madison offers a curriculum for the study of public policy problems within the framework of the social sciences and related disciplines. Lyman Briggs makes available a liberal curriculum for students especially interested in science and mathematics.

Today, almost 42,000 students attend the University at East Lansing. About 85 percent are from Michigan; the remainder includes more than 1,000 foreign students from 81 countries.

MICHIGAN STATE
UNIVERSITY
(continued)

In the land-grant tradition it pioneered, Michigan State University is concerned with research and service as well as teaching. All colleges and the Agricultural Experiment Station are engaged in a wide range of research. Approximately 3,000 individual projects are in process. The University's research tools include the Control Data 6500 computer, a cyclotron of the sector-focused type capable of accelerating protons to 50 MeV (60,000 miles per second), and the MSU Observatory which houses a 24-inch reflecting telescope, a computer and related equipment. Modern facilities include the following buildings: chemistry, biochemistry, psychology research, veterinary medicine, plant science research, natural resources, food science, pesticide research, and life sciences.

Through an agreement with the Atomic Energy Commission, MSU has become a national center for basic research on plants and their reactions to radiation; involved is a \$2 million building, a staff of approximately 90 persons and an annual budget of approximately \$1 million.

Benefits of the University are brought to every county in Michigan by the Cooperative Extension Service and the Continuing Education Service. Their programs, on and off campus, provide a wide range of technical information and formal course work for hundreds of thousands of Michigan citizens. The Kellogg Center for Continuing Education, one of the finest conference centers in the nation, annually hosts nearly 50,000 adults who come to the campus for some 600 conferences and other educational meetings.

In broadening the scope of educational opportunity, MSU is building on its long experience in continuing education to develop a Lifelong Education Program which would offer University resources to persons who are educationally or economically excluded from the traditional campus programs; to those who seek new skills or wish to update present skills; and to those who wish through education to make their leisure time more productive. The Program also would enable the University to cooperate with local communities in assessing, developing, and expanding their continuing education projects.

Michigan State University's land-grant concept of service is international. Supported by grants from the federal government and private foundations, Michigan State University maintains research and educational assistance projects in Asia, Africa and Latin America. International projects have given many faculty members overseas experience, adding a new dimension to their teaching.

With more than a century of educational achievement behind it, Michigan State University continues to apply its academic and physical resources to the problems of today and the challenges of the future.

HONORARY DEGREES

EDWARD R. GARRETT

Since receiving your undergraduate and graduate degrees in chemistry from Michigan State University, you have earned an international reputation as a teacher and research scientist in pharmacology. During eleven fruitful years as a senior research specialist with the Upjohn Company, you successfully introduced the quantitative principles of the basic sciences to the pharmaceutical industry to replace less effective approaches. At your interdisciplinary research center in the University of Florida, you have trained graduate scientists who now hold important positions in pharmaceutical corporations and in universities throughout the world. Through your knowledge, enthusiasm and creative ability you have had a profound influence on the development of the many branches of pharmacy and on modern methods of drug design and regulation. Your many authoritative publications and lectures at international forums are expressions of scholarship that is both scientific and humane. Because of your contributions to man's scientific advancement, and because of the distinction which you have brought to yourself and your alma mater, Michigan State University is pleased to grant you the degree of Doctor of Science.

GEORGE M. JOHNSON

Throughout your long career as an educator and jurist, you have contributed to the development of legal education and social change in America. As a professor and dean at the Howard University Law School, and later as a professor in this University's College of Education, you used your integrity and knowledge to influence reform measures both in the courts and in higher education. Your wisdom and talents of leadership made an important impact during your tenure as a member of the U.S. Commission on Civil Rights. You have tutored and inspired many of our civil rights lawyers. You have shared your penetrating insights into critical issues of our social condition in esteemed scholarly publications. While vice-chancellor of the University of Nigeria, you instilled a new sense of importance and achievement in the work of that aspiring institution. In fulfilling the responsibilities of these and other public duties you have faithfully supported the cause of social justice and human dignity. Because of your unusual record in legal affairs, your exemplary service to education, and your continuous devotion to human rights, Michigan State University is pleased to grant you the degree of Doctor of Laws.

HONORARY DEGREES

LYLE C. ROLL

Your accomplishments as an industrialist and business executive have been extraordinary. Because of your energy and vision, you have advanced through a long series of positions with the Kellogg Company, the largest producer of cereal foods in the nation, to become its Chief Executive and Chairman of the Board. Your analytical mind and effective articulation of production and marketing problems have given you a unique ability to deal with the economic problems affecting the nutrition and health interests of the public. All of your varied endeavors have profited from your broad knowledge and your enlightened view of corporation management. In addition to your career in business, you have devoted much time and effort to civic projects important to the cultural welfare of the people in this state. In recognition of your contributions to the advancement of American industry and to the economic and civic welfare of your fellow citizens, Michigan State University is pleased to grant you the degree of Doctor of Laws.
